

elipson® | Music Center Connect HD

INTEGRATED AMPLIFIER - TUNER - CD PLAYER - BLUETOOTH & WI-FI

The Music Center Connect HD is Elipson's newest receiver which is now equipped with a Wi-Fi connection.

Then you will be able to enjoy all the music from streaming platforms (Qobuz, Spotify, Tidal, Deezer, Internet Radio ...) or from your stored music files

This class-D amplifier features ICE Power technology. Its power rating is largely sufficient (2x120W), and a comprehensive range of connections is included. In addition to standard inputs and outputs, the Music Center BT HD features an optical input, a Wi-Fi connexion playing Hi-Res audio files (Solo mode) or playing CD quality audio files (Muti-room mode). It is also compatible with the Apt-X HD protocol, which enables playback of high-resolution files up to 24-bits, and a pre-out connection for a power amplifier. A subwoofer may be connected to the SUB output. This output features an adjustable filter which covers frequencies between 50 and 200 Hz, thus guaranteeing optimal compatibility with the main speakers.

The touch user interface is situated under the CD slot. The RDS FM tuner adds the finishing touch to this very versatile receiver.

To enjoy optimal integration into your living room decor, a specially designed stand featuring a cable path is also available.

Simply put, this is one of the rare ultra-connected circular receivers to offer a truly exceptional audiophile-grade listening experience.

The Music Center Connect HD is perfectly compatible with the other products of the ELIPSON CONNECT range.

TECHNICAL

Amplifier
